

# Healthy Work: Stress, Productivity, and the Reconstruction Of Working Life

Evidence is accumulating that in many contemporary work environments people are literally working themselves to death. But what do we really know about job-related stress and illness? Based on a ten-year study of nearly five thousand workers, this path-breaking book by a distinguished industrial engineer and sociologist and a specialist in industrial medicine identifies a clear connection between work-related illness and workers lack of participation in the design and outcome of their labors.
