

## WHICH WAY OUT? - TRIANGULATION (Professional Land Navigation Series)

The methods used in this eBook series have been tested in the field with many students. Students taking courses with the author of this eBook series had to be BLIND FOLDED and taken into an UNKNOWN location. They were given several topographic maps. They had to identify the correct 1:50,000 scale topographic map and locate where they were (using the techniques we will discuss in the Advanced eBook). After this they had to find many points in the field (which were NOT obvious with flags or markers that most courses utilize), that were on small wooden markers placed high off the ground on a tree. They were not obvious at all. They had to know where they were in order to spot them. In order to pass the course, they had to know where they were and find all the points in a specified time period. Many points were several grid squares apart. The course was extremely challenging, but exciting. These methods are what you will be given in this eBook series to help you become a Professional Land Navigator. All of the eBooks together will be much more comprehensive than buying one text on the subject. A very small price to pay!! This eBook deals with Triangulation on the topographic map. It also deals with the calculation of Grid Bearings using Grid references only! You can purchase an App for your phone that will do this, but this eBook will show you STEP by STEP how those calculations are made. This will allow you to verify if the results make sense.
